

AC02 BLE Sugar

1. Description

The leaf which is equipped with the technical certification satisfied BLE module BGM11S22F256GA-V of Silicon Labs can connect with MCU leaf by UART.

2. Leaf specification

2-1. Block diagram

2-2. Power supply specification

Symbol	Parameter	Condition	Min.	Typ.	Max.
Vdd	Power Supply Voltage	—	2.4V	3.3V	3.8V
Idd	Operating current	Active	-	3.8mA	-
		Sleep	-	2.8uA	-

2-3. Main parts

Reference No.	Part name	Part number	Vendor name	note
IC200	BLE module	BGM11S22F256GA-V2	Silicon Labs	—

2-4. Appearance

Top Side	Back Side
<p>Built-in antenna</p>	

2-5. Pinout

Name	Function
A2	TXD : UART send D9 can also be the alternative due to the replacement of chip's resistor
A1	RXD : UART receive D8 can also be the alternative due to the replacement of chip's resistor
D7	WAKEUP : wakeup H : wakeup
RESET	RST : reset
SWCLK	Debug I/F clock
SWDIO	Debug I/F data input/output
3V3	3.3V power input
GND	GND

3. BLEModule(BGM11S22F256GA-V2) Specifications

3-1. Description

Item	内容
SoC	EFR32BG1 (ARM Cortex-M4)
Bluetooth version	4.2
Frequency range	2400M ~ 2483.5MHz
Internet Security	<ul style="list-style-type: none"> General Purpose CRC Random Number Generator Hardware Cryptographic Acceleration for AES 128/256,SHA-1, SHA-2 (SHA-224 and SHA-256) and ECC
RX sensitivity	-90 dBm @ 1 Mbit/s GFSK
TX power	+8dBm
RF certification	CE, full FCC, ISED Canada, Japan and South-Korea
Flash	256KB
RAM	32KB
Interfaces	UART

3-2. Electrical characteristics

3-2-1. Absolute Maximum Ratings

Parameter	Value
Operating Temperature	-40℃ to +85℃
Maximum Operation Voltage	3.8V

3-2-2. Rating

Symbol	Parameter	Condition	Min.	Typ.	Max.
Vdd	Power Supply Voltage	—	2.4V	3.3V	3.8V
Idd	EM0 Active mode	38 MHz HFRCO all peripherals disabled	-	3.8mA	3.99mA
	EM1 Sleep mode	38 MHz HFRCO	-	1.33mA	1.44mA

		all peripherals disabled			
	EM2 Deep Sleep mode	Full RAM retention and RTCC running from LFXO	-	33uA	-
	EM3 Stop mode	Full RAM retention and CRYOTIMER running from ULFRCO	-	2.8uA	6uA
	EM4H Hibernate mode	128 byte RAM retention, RTCC running from LFXO	-	1.1uA	-
	EM4S Shutoff mode	no RAM retention, no RTCC	-	0.04uA	0.20uA
	Receive mode, active packet reception (MCU in EM1 @38.4 MHz, peripheral clocks disabled)	1 Mbit/s, 2GFSK, F = 2.4 GHz, Radio clock prescaled by 4	-	9.0mA	-
	Transmit mode (MCU in EM1@ 38.4 MHz, peripheral clocks disabled)	0 dBm output power, Radio clock prescaled by 3	-	8.2mA	-
		2 dBm output power	-	16.5mA	-
		8 dBm output power	-	24.6mA	-

-----------------------	--

enum_le_gap_connectable_mode

Value	Name	Description
0	le_gap_non_connectable	Non-connectable non-scannable.
1	le_gap_directed_connectable	Directed connectable (RESERVED, DO NOT USE)
2	le_gap_undirected_connectable	Undirected connectable scannable. Deprecated, replaced by enum le_gap_connectable_scannable. This mode can only be used in legacy advertising PDUs.
2	le_gap_connectable_scannable	Undirected connectable scannable. This mode can only be used in legacy advertising PDUs.
3	le_gap_scannable_non_connectable	Undirected scannable (Non-connectable but responds to scan requests)
4	le_gap_connectable_non_scannable	Undirected connectable non-scannable. This mode can only be used in extended advertising PDUs.

enum_le_gap_discoverable_mode

Value	Name	Description
0	le_gap_non_discoverable	Not discoverable
1	le_gap_limited_discoverable	Discoverable using both limited and general discovery procedures
2	le_gap_general_discoverable	Discoverable using general discovery procedure
3	le_gap_broadcast	Device is not discoverable in either limited or generic discovery procedure, but may be discovered by using the Observation procedure
4	le_gap_user_data	Send advertising and/or scan response data defined by the user using le_gap_bt5_set_adv_data. The limited/general discoverable flags are defined by the user.

enum_le_gap_discover_mode

Value	Name	Description
0	le_gap_discover_limited	Discover only limited discoverable devices
1	le_gap_discover_generic	Discover limited and generic discoverable devices
2	le_gap_discover_observation	Discover all devices

enum_le_gap_address_type

Value	Name	Description
0	le_gap_address_type_public	Public address
1	le_gap_address_type_random	Random address
2	le_gap_address_type_public_identity	Public identity address resolved by stack
3	le_gap_address_type_random_identity	Random identity address resolved by stack

3-5. Event callback function

Event callback function	Description
ble_evt_gatt_server_attribute_value	The callback function pointer is being called when the attribute value in local GATT database is changed by remoted GATT client [statement] name.ble_evt_gatt_server_attribute_value = my_evt_gatt_server_attribute_value;
ble_evt_le_connection_open	The callback function pointer is being called when center is connected [statement] name..ble_evt_le_connection_open = my_evt_le_connection_open;
ble_evt_le_connection_closed	The callback function pointer is being called when center is disconnected [statement] name.ble_evt_le_connection_closed = my_evt_le_connection_closed;
ble_evt_system_boot	The callback function pointer is being called when system is launched [statement] name.ble_evt_system_boot = my_evt_system_boot;
ble_evt_system_awake	The callback function pointer is being called when system has returned from sleep mode [statement] name.ble_evt_system_aware = my_evt_system_aware;
ble_evt_le_gap_scan_response	The callback function pointer is being called when receiving scan response [statement] name.ble_evt_le_gap_scan_response = my_evt_le_gap_scan_response;

3-6. Power saving

Sleep mode saves power and can be done by the function below.

```
function : ble112.ble_cmd_system_halt(1)
```

Wakeup if the WAKEUP signal of D7 is high.
